

EE Print Pack Combo Bags

SPEC SHEET

RETAIL BAGS

Mesh bag with one face of printed film.

The film face gives you the large print area and the mesh lets air through. It is the middle ground between straight mesh, which barely prints, and polyethylene, which does not breathe. Used for product that needs ventilation but also has to be seen on the shelf.

RUNS ON

Automatic wicket baggers. Closes with Kwik Lok or traditional packing systems, and ships as a finished bag ready to pack and close.

SPECIFICATIONS

Weight range	1 lb to 10 lb
Construction	Poly and CLAF® net window
Closures	Kwik Lok and traditional packing systems
Packing systems	Automatic wicket baggers
Supplied as	Finished bag, ready to pack and close

WORKS GREAT FOR

Potato

The format most retail potato programmes settle on. The film face carries the brand and the cooking guidance; the net window lets the shopper see the tuber and lets the pack breathe so the potatoes do not sweat.

Onion

Onions need air at the neck and a retailer needs a printed panel. The combo is the only format that does both properly in one bag.

Citrus

For oranges and mandarins sold as a branded retail pack, the film face takes photographic artwork and the mesh window shows the real colour of the fruit behind it.

Garlic

Garlic is bought on appearance and sold in small counts. The net window shows the bulbs; the film face carries origin, variety and the brand.
