

Compostable Net Tubes

COMPOSTABLE

Certified compostable net tube, same format as the standard tube bag.

Same roll, same machine, same operation · what changes is the material. Used when the chain asks for compostable packaging in writing and you do not want to move your line to comply. The certification goes with the order.

RUNS ON

The same clipping and sealing equipment as a conventional tube bag. Net opening runs 3" to 17" tubular, at 12 to 20 g per metre.

SPECIFICATIONS

Standard	Tested according to ASTM D6400
Material	100% biobased · starch and natural additives
Bag capacity	0.5 lb to 4 lb
Net opening	3" to 17" tubular
Net weight	12 to 20 g per meter
Label	FSC-certified paper, 8 pt to 14 pt cardstock, printing up to 8 colors
Thread	Compostable cotton

WORKS GREAT FOR
Export citrus

The usual case: a European or Canadian chain adds a packaging requirement mid-season and the pack has to change without the line changing.

Onion and potato programmes

Where the retailer's sustainability commitment covers the bag as well as the tray, the compostable tube replaces the conventional tube at the same capacities.

Small-count retail packs

Bag capacities run from 0.5 lb to 4 lb, which covers most of the counts sold as branded retail packs.

This line is produced in Austria and Germany and supplied by EE Print Pack. It is not manufactured in our Guadalajara plants.
