

EE Print Pack Header Bags

SPEC SHEET

RETAIL BAGS

Printed header bag for peg display, in mesh, poly or both.

The header is the part people see when the bag hangs, and everything fits on it: logo, photo, weight, barcode. That is why it is the format for anyone selling in store who needs their brand read from a distance. We build it in mesh, in polyethylene, or combining the two, depending on how much air the product needs. The most common presentations are 2, 3 and 5 lb.

RUNS ON

Carousel machines, wicket systems and hand packing. If your line already runs wicketed bags, header bags drop into the same operation.

SPECIFICATIONS

Weight range	1/2 lb to 10 lb
Print	Up to 8 colors, high-end
Net options	Biodegradable, memory, soft or extruded
Packing systems	Carousel machine, wicket, hand packing
Properties	High breathability and product visibility

WORKS GREAT FOR Lime

Limes move fast and bruise at the stem end. Mesh body keeps air around the fruit through the cold chain, and the printed header still carries the brand at eye level on the peg. Common presentations are 2, 3 and 5 lb.

Onion

Onions need ventilation more than almost anything else on the shelf: trapped moisture at the neck is what starts the rot. A mesh body with a printed header gives you both the air and the print area, which straight mesh cannot.

Potato

Potatoes green under light and sweat in plastic. The mesh body handles the air; where a chain asks for more coverage, the poly and mesh combination shields part of the tuber while keeping the pack breathable.

Avocado

Avocado is sold by count and handled repeatedly before it reaches the shopper. The header gives you room for ripeness guidance and PLU information, and the body can be specified soft enough not to mark the skin.

Citrus

Oranges, mandarins and grapefruit are bought on colour. Mesh in the right shade makes the fruit read brighter on the shelf, and the header holds the variety, the count and the grower brand.
