

Knitted Net (Soft Woven)

MESH & NETTING

Elastic knitted net for delicate product.

Unlike extruded net, knitted net stretches and settles around the shape of the fruit, so it leaves no mark on the skin. That is why it is used on product that gets handled a lot, and where one mark is worth a rejection.

RUNS ON

Supplied in dark green, green, camel, yellow, orange, red, purple, black and white.

SPECIFICATIONS

Mesh colors	Dark green, green, camel, yellow, orange, red, purple, black, white
Construction	Knitted soft-woven net
Best for	Avocado, mango, fine export citrus

WORKS GREAT FOR

Avocado

Avocado skin marks under pressure and the mark does not go away. Knitted net gives where the fruit is widest, so the load spreads instead of concentrating on a few points of contact.

Mango

Mangos are packed at different ripeness stages and keep changing shape in the pack. An elastic net holds the fruit without fighting it as it softens.

Fine export citrus

Premium citrus sold on appearance, where the buyer is grading the skin as well as the fruit. Knitted net carries the count without leaving a pattern behind.
