

Poly Ventilated Bags

FILM & POLY

Printed polyethylene bag, perforated.

Polyethylene gives the best print, because the whole surface is printable area, and the perforation solves the air. Used where the image carries the weight and the product tolerates some moisture.

RUNS ON

Closes with Kwik Lok, tape or a knot. Supplied with a finger punch or a handle at the top, depending on how the pack is displayed.

SPECIFICATIONS

Weight range	1 lb to 10 lb
Print	High-end printed poly label
Closures	Kwik Lok, tape, knot
Handling	Finger punch or handle at the top
Material	Recyclable plastic

WORKS GREAT FOR

Apple

Apples hold up well in film and sell on appearance. A printed poly bag gives the whole surface to the brand, and the perforation releases the moisture the fruit gives off in the pack.

Corn

Corn is bought on freshness cues - the husk, the silk. Clear printed poly shows it and the perforation keeps the pack from sweating.

Chili

Chiles are sold by variety and heat level, which is a lot of information to print. Poly gives the area to print it legibly.

Citrus

Where a retail programme wants a high-impact printed bag rather than mesh, perforated poly carries photographic artwork across the whole face.
